Patent No. 6146850

GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Better, Marc D.
APPLICANT: Studnika, Gary M.
TITLE OF INVENTION: Immunotoxins Comprising Ribosome-Inactivating
TITLE OF INVENTION: Immunotoxins Comprising Ribosome-Inactivating
TITLE OF INVENTION: Proteins
NUMBER OF SEQUENCES: 173
CORRESPONDENCE ADDRESS:
ADDRESSEE: McAndrewa, Held & Malloy, Ltd.
STREET: 500 West Madison Street, 34th floor

Patent No. 6376217
GENERAL INFORMATION:
APPLICANT: Better, Marc D.
APPLICANT: Carroll, Stephen F.
APPLICANT: Studnika, Gary M.
TITLE OF INVENTION: Immunotoxins Comprising Ribosome-Inactivating
TITLE OF INVENTION: Proteins
NUMBER OF SEQUENCES: 173
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             SOFTWARE: Patentin Release #1.0, Version #1.25

US-09-792-793-39

Sequence 39, Application US/09792793A

Patent No. US20020168370A1

GENERAL INFORMATION:

APPLICANT: McDonald, John R.

APPLICANT: Coggins, Philip

TITLE OF INVENTION: OTHER INFLAMMATORY CONDITIONS AND DISORDERS

FILE REFERENCE: 25020-601D

CURRENT APPLICATION NUMBER: US/09/792,793A

CURRENT FILING DATE: 2001-02-22

NUMBER OF SEQ ID NOS: 93

SOFTWARE: PATENTIN VEY: 2.00
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       59 TISVAIDVTNVYIMGYRAGDISYFF---NEASATEAAKYVFKDAMRKVTLPYSGNYERLQ 115

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

"Analysis of several key active site residues of ricin A chain by
"Analysis of several key active site residues of ricin A chain by
"Analysis of several key active site residues of ricin A chain by
"The mutagenesis and X-ray crystallography.";

"Entering the single for an implication of several to plant cells. The A chain is responsible for inhibiting protein synthesis through the catalytic inactivation of 60s ribosomal subunits. It acts as a glycosidase that removes a specific adenine residue from an exposed loop of 28s ribosomal RNA. As this loop is involved in the binding of elongation factors, the modified ribosomes are unable to support protein synthesis. The A chain can inactivating them faster than the cell can make new ones. A single A-chain molecule can therefore kill an animal cell. The B chain binds to cell receptors and facilitates the entry into the cell of the A chain, B chains are also responsible for cell agglutination (lectin activity). It binds to beta-D-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           "X-ray structure of recombinant ricin A-chain at 1.8-A resolution."; J. -!-SUBUNIT. DISULFIDE-LINKED DIMER OF A AND B CHAINS.
-!-DOMAIN: THE B CHAIN IS COMPOSED OF TWO DOMAINS, EACH DOMAIN
CONSISTS OF 3 HOMOLOGOUS SUBDOMAINS (ALPHA, BETA, GAMMA).
-!-SIMILARITY: IN THE N-TERMINAL SECTION; BELONGS TO THE RIBOSOME-
INACTIVATING PROTEIN FAMILY TYPE 2 RIP SUBFAMILY.
-!-SIMILARITY: CONTAINS 2 ricin B-type lectin domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          TISSUE=Seed;

Kimura M., Sumizawa T., Funatsu G.;

The complete amino acid sequences of the B-chains of abrin-a and abrin-b, toxic proteins from the seeds of Abrus precatorius.";

Biosci. Biotechnol. Biochem. 57:166-169(1993).

I- FUNCTION: THE A CHAIN IS REPONSIBLE FOR INHIBITING PROTEIN SYNTHESIS THROUGH THE CATALYTIC INACTIVATION OF 60S RIBOSOWAL SUBJUITS BY REMOVING ADENINE FROM POSITION 4,324 OF 28 S. RENA. ARRIN-A. IS MORE TOXIC THAN RICIN.

-I- FUNCTION: THE B CHAIN IS A GALACTOSE-SPECIFIC LECTIN THAT FALLIPTES THE BINDING OF ABRIN TO THE CELL MEMBRANE THAT

"Studies on crystal structures, active-centre geometry and deputinating mechanism of two ribosome-inactivating proteins.";
Biochem. J. 309:285-298 (1995).
-!- FUNCTION: TRICHOSANTHIN IS AN ABORTION-INDUCING PROTEIN. IT IS
CAPABLE OF INHIBITING HIV-1 INFECTION AND REPLICATION. IT
INACTIVATES EUKARYOTIC 60S RIBOSOMAL SUBUNITS.
-!- CATALYTIC ACTIVITY: Endohydrolysis of the N-glycosidic bond at one specific adenosine on the 28S rRNA.
-!- SIMILARITY: BELONGS TO THE RIBOSOME-INACTIVATING PROTEIN FAMILY.
TYPE I RIP SUBFAMILY.
                                                     01-1007-1990 (Rel. 16, Last sequence update)
15-SEP-2003 (Rel. 42, Last annotation update)
Ribosome-inactivating protein alpha-trichosanthin precursor
(rRNA N-glycosidase) (EC 3.2.2.2) (Alpha-TCS).
Trichosanthes Airilowii (Mongolian snake-gourd).

Bioconj. Chem. 5:423-429(1994).
-!- FUNCTION: RIBOSOME-INACTIVATING PROTEIN OF TYPE 1, INHIBITS
-!- CATALYTIC ACTIVITY: Endohydrolysis of the N-glycosidic bond at one specific adenosine on the 28S FRNA.
-!- SIMILARITY: BELONGS TO THE RIBOSOME-INACTIVATING PROTEIN FAMILY.
-!- TYPE 1 RIP SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   RIP2 BRYDI STANDARD; PRT; 282 AA.

BIOTECHNOLOGY: Especially useful as immunotoxin for pharmacological applications as it has low toxicity in rats and mice but is potent once inside target cells.

SIMILARITY: BELONGS TO THE RIBOSOME-INACTIVATING PROTEIN FAMILY.

TYPE 1 RIP SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Montecucchi P.C., Lazzarini A.M., Barbieri L., Stirpe F., Soria M.,

              Islam M.R., Hirayama H., Funatsu G.;
"Complete amino acid sequence of luffin-b, a ribosome-inactivating protein from sponge gourd (Luffa cylindrica) seeds.";
Agric. Biol. Chem. 55:229-338(1991).
-!- CATALYTIC ACTIVITY: Endohydrolysis of the N-glycosidic bond at one specific adenosine on the 28S rRNA.
-!- SIMILARITY: BELONGS TO THE RIBOSOME-INACTIVATING PROTEIN FAMILY.
-! TYPE I RIP SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  9 INFTTAGATVQSYTNFIRAVRGRLTTGADVRHEIPVLPNRVGLPINQRFILVELSNHAEL

"Complete amino acid sequence of the A chain of mistletoe lectin I.";
PEBS Lett. 399-153-157(1996).
-!- FEBS Lett. 399-153-157(1996).
-!- FUNCTION: THE A CHAIN IS RESPONSIBLE FOR INHIBITING PROTEIN
SYNTHEELS THROUGH THE CATALYTIC INACTIVATION OF 60S RIBOSOMAL
SUBUNITS BY REMOVING ADENINE FROM POSITION 4,324 OF 28 S RENA. THE
B CHAIN BINDS TO CELL RECEPTORS AND PROBABLY FACILITATES THE ENTRY
INTO THE CELL OF THE A CHAIN; B CHAINS ARE ALSO RESPONSIBLE FOR
CELL AGGLUTINATION (LECTIN ACTIVITY).
-!- CATALYTIC ACTIVITY: EndobyAcolysis of the N-glycosidic bond at one
specific adenosine on the 28S TRNA.
-!- SUBUNIT: Disulfide-linked dimer of A and B chains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                  PHARMACEUTICAL: Due to its immunomodulative effects it is being studied in clinical trials in cancer patients as it may slow the growth of cancer cells and be an effective treatment for solid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              TO THE RIBOSOME-INACTIVATING PROTEIN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             -!- MISCELLANEOUS: TWO ISOFORMS OF MLA EXIST; GLYCOSYLATED FORM MLA AND NON-GLYCOSYLATED FORM MLA'.

"Nucleotide sequence of cDNA encoding alpha-luffin, a ribosome-
inactivating protein from Luffa cylindrica.";
Plant Mol. Biol. 18:1199-1202(1992).
-!- CATALYTIC ACTIVITY: Endohydrolysis of the N-glycosidic bond at one
specific adenosine on the 28s rRNA.
-!- SIMILARITY: BELONGS TO THE RIBOSOME-INACTIVATING PROTEIN FAMILY.
TYPE 1 RIP SUBFAMILY.
                                                                                                                                                           O'DEC-1992 (Rel. 24, Created)
